**DETAILED ACTION**

***Examiner's Comments***

1. The following issues were discussed in a telephonic interview with Applicant's representative, Mr. David Sigmond, on September 10, 2004:
  - a. Applicant had previously filed two petitions relating respectively to objections to the specification and drawings. (See postcard filing receipt dated 9/2/03.) While the examiner personally remembers seeing these petitions, they have been misplaced by the Office. Applicant's representative and the examiner discussed the objections upon which these petitions were based, and the examiner agreed that these objections were improper. Accordingly, the outstanding objections to the drawings and specification are withdrawn and the petitions are rendered moot.
  - b. Applicant had also filed an amendment that was also misplaced. (See postcard filing receipt dated 9/2/03.) Applicant has incorporated this prior amendment to the specification into the most recent amendment filed 9/10/04. As such, the issue of the missing prior amendment is also moot.
  - c. Applicant has agreed to file formal drawings, including a corrected label "143" that was erroneously labeled as "144." The examiner agreed that these changes would be proper.

***Allowable Subject Matter***

2. Claims 1-120 are allowed.

Art Unit: 2815

3. The following is an examiner's statement of reasons for allowance: it was generally known to form IC packages wherein the chip includes ball leads or "terminals" that extend through the bottom of the package or "housing" and also include leads that extend through the side periphery of the package, and wherein the terminals and leads are electrically connected to IC pads (see e.g., Washida '135, FIG 2). However, a search of the relevant prior art failed to disclose or reasonably suggest such a device further having at least the following features:

- a. a two-piece housing structure wherein the first and second housing portions are not integral (e.g., claim 1);
- b. a housing for such a device wherein the bottom surface of the insulative housing includes a peripheral portion adjacent to the side surfaces and a central portion within the peripheral portion and spaced from the side surfaces, wherein the peripheral portion protrudes downwardly from the central portion (e.g., claim 21); or restated, wherein the central portion is recessed relative to the peripheral portion (e.g., claim 31); or
- c. providing within such a device a terminal that protrudes downwardly from and is integral with the routing line (e.g., claim 61).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

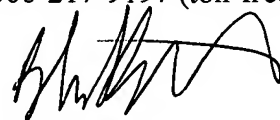

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Washida et al. '135
- b. Chew et al. '388.
